EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Sidney Johnston (Registration No. 29,548) on November 22, 2004.

Please replace claim 15 as follow:

15. (new) A method for searching network messages for pre-defined regular expressions in order to apply a selected action to network messages matching a given regular expression, the method comprising the steps of:

storing the pre-defined regular expressions in a content-addressable memory (CAM) having a plurality of entries;

decoding a given network message, or selected portion thereof, for comparison with the regular expressions contained within the CAM;

inputting a decoded portion of the given network message to the CAM for comparison with all of the regular expressions stored therein;

decoding an output returned from the CAM; and

identifying, in response to the decoded output, the action that corresponds to a first CAM entry matching the inputted network message or selected portion thereof, whereby input to the CAM is compared against all CAM entries at the same time, allowing high-speed pattern matching of network messages.

Examiner's Statement of Reasons for Allowance

2. This office action is in response to the amendment filed on August 9, 2004. Previous office action contained claims 1-25. Amendment filed on August 9, 2004 have been entered and made of record.

3. Claims 1-25 are allowed.

4. Claims include limitations that the prior art of record does not appear to teach or render obvious the claimed limitations as recited below.

5. The following is a statement of reasons for the indication of allowable subject matter:

Khanna U.S. Patent 6,591,331 teach a method and apparatus for determining the address of the highest priority matching entry in a segmented content addressable memory device comparing each entry in each of the CAM array block, and encoder encode a match flag signals into a block of address of the highest priority matching location, and the decoder that decodes the block address. However, the prior art of record fails to teach or suggest individually or in combination as stated in claims 1,15,19, and 25, "a decoder circuit coupled to the regular expression storage device, the decoder circuit configured to control an input to the CAM that includes a given network message or selected portion thereof for comparison with the regular expressions contained within the CAM, and to receive and decode an output returned from the regular expression storage device, the output identifying the action to be applied to the given network message or portion thereof," and in combination with other limitations as set forth in the independent claims. Claims 2-14,16-18, and 20-24 are allowed due to dependent claims.

Art Unit: 2143

6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
